1. Study programme profile

The Principality of Liechtenstein is a country with an international and cross-border orientation. Due to the fact that Liechtenstein is not only embedded in a customs and monetary union with Switzerland, but also a member of the European Economic Area, Liechtenstein acts as a bridge between the European Union and Switzerland, the biggest wealth management market in the world. This unique situation has enabled the small Principality to develop into one of the most experienced cross-border regions of the world. Our graduate programme in Finance provides the know-how required to understand and manage highly international activities, products and services.

Liechtenstein ranks among the most significant international financial centres. It stands for a high quality of service in dealing with wealthy private clients, for its liberal tax and company law and for its access to the European Single Market Area. In addition to private banking, Liechtenstein has been recognised as an attractive location for domestic and foreign investment funds, insurance companies and asset managers.

The entrepreneurial spirit strongly established in the region has also led to the emergence of very successful, internationally operating industrial undertakings both in Liechtenstein and the immediate vicinity.

The Master's degree programme in Finance aims to provide advanced state-of-the-art knowledge of finance. It focuses on the core aspects of asset management, risk management and international finance. Hence, graduates will gain knowledge of the methodology required to successfully manage the challenges and responsibilities of any finance-related jobs. The programme has been developed based on industry demands in knowledge, methodological skills, entrepreneurial understanding and team orientation. We prepare graduates for professional careers in international settings by offering projects conducted in collaboration with financial services companies and international partner universities. Graduates will be well-prepared for a professional career within the financial services industry, in related regulatory and supervisory authorities as well as in consulting institutions. The strong methodological, empirical and theoretical knowledge and skills obtained during this programme provides the basis for a promising application to a PhD programme at well-respected universities, including the University of Liechtenstein. As this programme sufficiently integrates the Chartered Financial Analyst (CFA) Body of Knowledge curriculum, we are a member of the CFA University Recognition Programme and can also offer several scholarships.

The Master's degree programme in Finance is in line with the university's overall strategy as it (i) follows a strategy of excellence, since the applicants must undergo a rigorous selection process, (ii) focuses on private wealth management, one of the university's selected research fields, and (iii) pursues both regional relevance (the financial services sector contributes significantly to Liechtenstein's GDP) and international collaboration (through projects with international university partners).

1.1. Qualification profile

While undergraduate degrees mainly focus on basic concepts to provide a global overview and provide a basic academic foundation permitting professional entry, a Master's degree programme offers a specialised focus with the delivery of the methodological skills required for the intended specialisation. The Master's degree programme in Finance at the University of Liechtenstein offers such a specialisation in the field of Finance. Students will be highly qualified for a professional career in finance, for example financial risk management, asset, investment and wealth management, international financial management and corporate finance, portfolio management, financial engineering, product development and research projects. These jobs are offered by asset and capital management firms, banks, insurance companies, investment undertakings, financial advisors and family offices, finance departments of non-financial companies, central banks, consulting firms, regulatory authorities and financial market authorities.

Successful graduates of the Master's degree programme in Finance at the University of Liechtenstein will be able to

- a) pursue their future profession according to the latest insights gained from academic research and practice;
- b) develop and apply problem-solving methods both individually and in a team in their future profession;
- c) demonstrate skills for leadership roles and social responsibility;
- d) think and act in a sustainable, holistic, global, cross-subject and interdisciplinary way;
- e) autonomously conduct in-depth academic work which is required to accomplish research projects or gain admission to a doctoral degree programme.

While the programme leads to an advanced knowledge in finance in accordance with current international standards, it is also focused on the importance of the region. Students of this programme will focus on financial risk management together with asset, investment and wealth management, and international aspects of these fields.

In order to solve complex problems, students will learn how to apply relevant quantitative and empirical research methods. Ethics, teamwork, leadership competence, project management, presentation and communication skills are so indispensable in today's working environment, therefore they are taught within an interdisciplinary module. Step-by-step students will be trained to ultimately perform their own research.

The entire programme is entirely conceptualised to further emphasise the important role of acquiring job-related experience. Several projects are included in the curriculum (with MasterPROJECT), and additional guest lectures will be given by business leaders. Moreover, educational journeys provide an opportunity to network with people in important international finance markets.

Small classes and one-to-one tuition provide a personal, creative and productive learning and research environment focusing on the development of strong individual profiles. A voluntary exchange semester at one of the programme's high-profile international partner universities provides students with an opportunity to test their acquired knowledge in a different cultural and academic environment and offers new perspectives and personal development opportunities.

Finally, the design of this Master's degree programme is closely connected to the University's strategy in terms of its contribution to society and the objectives of the research area of "Private Wealth Management". The following list of objectives illustrates our graduates' unique qualifications, underlining the connection of this study programme with the University's strategy. The main objectives are:

- Our graduates know theoretical fundamentals and current empirical findings about the **decision behaviour of individuals and institutions** and are able to apply their knowledge to practical situations.
- Our graduates understand **risk management as an important success factor for economic activities** and apply risk management techniques which are appropriate for the situation at hand.
- Our graduates take **ethical considerations** into account when making decisions.
- Our graduates are able to **transfer** insights and results **from academic literature to practical decision-making** and **communicate effectively** on topics within their discipline.

1.2. Entry requirements

The Master's degree programme in Finance builds upon a relevant Bachelor's programme or an equivalent university programme. Further details can be found in our Admission Guidelines.

1.3. Learning outcomes

The Master of Science in Finance is designed such that students will acquire specific professional knowledge and understanding, generic cognitive skills, communication and learning strategies.

Knowledge and understanding

- Based on the knowledge and understanding gained in the undergraduate programme, graduates demonstrate knowledge which covers and integrates the main features, boundaries, terminology and conventions of the field of finance.
- Graduates show a critical understanding of the intellectual and ethical content of selected financial structures in order to substantiate appropriate judgements.
- Graduates provide a basis for originality in developing their own research ideas in the field of finance.

Applied knowledge and understanding

- Graduates show problem-solving abilities in the field of finance for new or unfamiliar environments within broader (or multidisciplinary) contexts.
- Graduates formulate judgements which have been explored critically and arrive at a conclusion.
- Graduates conduct a complex research, development or investigation project and identify and implement relevant outcomes.
- Graduates provide a basis for originality in applying appropriate methodologies in research projects in finance.

Generic cognitive skills

- Graduates apply critical analysis, evaluation and synthesis to issues which are at the forefront of finance.
- Graduates deal with complex issues in the field of finance and make informed judgements in situations where information is incomplete or inconsistent.
- Graduates include social and ethical aspects when applying their knowledge and understanding.

Communication

- Graduates communicate research results at an expert level in a variety of roles and contexts.
- Graduates use appropriate methods to communicate to a range of audiences with different levels of knowledge and expertise.

Learning strategies

- Graduates exercise autonomy and initiative in carrying out the self-directed programme of study or research projects.
- Graduates demonstrate capacity to manage time and physical resources as an individual and as a group member and to collaborate with peers and others in sharing knowledge and research.

1.4. Programme structure

The Master's degree programme in Finance is arranged in a modular structure and is characterised by both its academic rigor and practical orientation. This programme comprises four semesters of full-time study corresponding to 120 ECTS (European Credit Transfer System).

In the first semester, courses in research methodologies and (based on the knowledge acquired in an undergraduate programme) advanced concepts in finance are offered. The second semester concentrates on risk management and asset management concepts. The third semester offers advanced concepts on investments. In the fourth semester, students write, present and defend their thesis. Table 1 provides an overview.

Table 1: Programme Structure

Semes-ter	Module Title	ECTS
1	Financial Economics and Markets	6
1	Quantitative Finance	6
1	Empirical Finance	6
1	International Finance	6

4	Cross-Faculty Elective Subject 4	3
4	Master Thesis	27
Total ECTS in the Fourth Semester		30
1-4	Total ECTS	120

Liechtenstein House of Finance LAB

The Liechtenstein House of Finance LAB is a laboratory module, allowing students to deepen their knowledge in areas addressed in the compulsory courses. They combine relevant topics, knowledge and skills in order to support the combination of theoretical and practical professional work. The course offer changes from semester to semester. A choice of possible offers is provided in Table 2.

¹ Amended by Senate resolution on 03/05/2017.

Semes-ter	Lecture Title	ECTS
2	MasterLAB in Financial Services 1	3
2	Educational Journey Project	3
3	Portfolio Management Game	3
3	Banking Game	3
3	MasterLAB in Financial Services 2	3
3	Investment Banking Workshop	3

Cross-Faculty Electives (12 ECTS)

Students have the opportunity to choose between several Cross-Faculty Electives, totalling 12 ECTS. They consist of a variety of courses on a list published at the beginning of each academic year (courses are equivalent to 3 or 6 ECTS, taught during winter and summer semesters).

Liechtenstein House of Finance Electives

The **Liechtenstein House of Finance Electives** module gives students the opportunity to deepen their knowledge in related fields of finance which are not part of the compulsory curriculum. A choice of possible lectures on offer is provided in Table 3. One of the four compulsory Cross-Faculty Electives (3 ECTS) can be substituted with one of the lectures from the Liechtenstein House of Finance Electives.

Table 3: Lectures for Liechtenstein House of Finance Electives

Semes-ter	Lecture Title	ECTS
3	International Taxation	3
3	Philanthropy and Ethics	3
3	Special Topics in Finance	3

Voluntary Semester Abroad (30 ECTS)

The third semester could be used for an exchange semester at one of our partner universities across the globe.

Extra-Curricular Events will complement this study programme.

2. Formal aspects

The programme corresponds to Qualification Level 2 of the Bologna Programme and to Qualification Level 7 of the “European Qualifications Framework for Lifelong Learning” developed by the European Union. Table 4 provides an overview.

Table 4: Formal aspects

Duration and Workload	4 semesters full-time study 120 ECTS credits
Language	English
Credits	Courses are assigned a certain number of hours in class and a number of hours for individual coursework; the sum of both yields the actual workload. 30 work hours are equivalent to 1 ECTS credit point. 30 ECTS credit points correspond to the average coursework of a semester at the University of Liechtenstein.
Academic Degree	Master of Science in Finance
Official Abbreviation	MSc
Admission Requirements	Admission requirements are specified in the Admission Guidelines for the Master’s degree programme in Finance.
Further Educational Options	The degree grants eligibility for a doctoral degree programme.

3. Module structure

The following tables list all modules and lectures, specified by additional formal information.

The module structure of the first semester intends to bring all the participants on a similar level in Finance. In addition, this semester provides the methodological basis required for a research-oriented Master’s degree in Finance. Table 5 outlines the first semester modules and lectures.

Legend:

CO – compulsory

OC – optional compulsory

LE – lecture

SE - seminar

EX – exercise

EXC - excursion
